Naturally anti-mould

Using nature's own defence mechanisms is the healthiest and most sustainable way of fighting mould in the home. Natural lime simply deprives moulds of what they need to survive. The result: fresh air and a pleasant atmosphere. Pure lime paint and pure lime plaster for indoors and out are thus particularly good wall coatings for allergy sufferers.

HAGA lime products are made from genuine ultra-pure natural lime from the Swiss Alps. Lime paint is the simplest and fastest way to apply natural lime to walls. Lime brush plaster is ideal for those who prefer a rougher finish. If walls are slightly uneven, fine lime plaster is just what's needed. For colourful walls, too, lime offers unique and amazingly attractive possibilities.

Advice and supplies

Natural lime paint

Thanks to the amazing properties of pit lime, known to man for centuries, HAGA Kalkfarbe (**HAGA lime paint**) is a top quality, genuine biological ultra-pure mineral finish.

Hygienic and antibacterial, free from solvents, free from drying agents, environmentally friendly and easy to dispose of.

Natural lime brush plaster

If you prefer a rougher finish, you should use HAGA Kalkstreichputz (**HAGA lime brush plaster**). Highly breathable, it completely silicifies with all mineral surfaces. HAGA Kalkstreichputz (**HAGA lime brush plaster**) produces an attractive matt natural wall finish.

Natural lime glaze

HAGA Kalklasur (**HAGA lime glaze**) is a high quality, pit lime-based, milky and translucent natural glaze. When combined with HAGA Vollton- und Abtönfarben (**HAGA spot and gradation colours**), it can produce tasteful wall surfacing with a range of tones, shades and structures in a wide range of designs. Natural HAGA Kalklasur (**HAGA lime glaze**) ensures a great atmosphere.

Fine natural lime plaster

HAGA Calkosit Kalkfeinputz (**HAGA Calkosit fine lime plaster**) is the ready-to-use decorative finishing plaster for mineral surfaces. Ideal for historic buildings and healthy and attractive houses. Made from pure white lime sand, the high quality binding agent pit lime and natural retarding agents.

HAGA Calkosit Kalkfeinputz (**HAGA Calkosit fine lime plaster**) bonds with the surface beneath through silification. It is highly breathable, moisture-regulating and odour-absorbent. Paste, ready-to-use, natural white.
